

### Instructions For Use

1. Take a supply of the O.S.V. bud ties out of the plastic bag and put them in a small box so they will be convenient to pick up.
2. After the bud has been inserted, take a bud tie in one hand holding it firmly between the thumb and index finger where the wire passes through the rubber band, with the ends of the wire pointing towards the understock.
3. Take hold of the other end of the rubber with the thumb and index finger of the other hand. Place the center of the slightly stretched rubber over the bud eye so that the eye is completely covered. Pull both ends of the rubber at the same time around the understock, being careful not to move the bud eye.
4. The two ends of the wire should now be pushed through the free end of the rubber strip. This completes the operation.

### How to organize a Grafting Crew

Two budders in one row could be served by one tier.

Example: First budder is grafting root stock n° 1, 3, 5, 7, etc...

Second budder is grafting root stock n° 2, 4, 6, 8, etc...

Suitable also for three budders.
